Tufts University - Department of Mathematics
Math 87 Homework Guidelines

1. You must submit **a single pdf**. This pdf should contain all of your answers to the problems, as well as any tables, figures, or plots with results. Homework that is more than one file will not be graded.

2. You should generate all necessary numerical results, tables, figures, etc., and report them in your write-up. You will lose points for not including results. The grader should not have to run any of your code to see your results.

3. A latex template for each homework will be provided. You can compile and fill in your answers on Overleaf (`https://www.overleaf.com/`) or download a latex editor.

4. You do not need to submit code. However, your results should be *reproducible*, meaning that you should report any parameters needed to obtain your results, and someone else should be able to reproduce your exact results with those parameters.

5. All homework must be submitted on Gradescope (`https://www.gradescope.com/`).

6. One homework will be dropped.

7. Late homework will receive a 20% deduction per day.
